White Hart Down

2020-08-02 Ian Cooper 'Very fair, tries hard, plays keenly, steadily improving his game. Should be useful when he is older.' - School report, Autumn 1971. Meet Ian Cooper: responsible for some of the most sublime moments in sports history. In his head. He never shirked a tackle, never missed a game (except for the one he did), and ran and ran and ran. Mostly away. He never hit any marathon walls though, because he was too busy building them. The mucky exploits of Sunday morning football on Wandsworth Common means he has, quite literally, always been full of shit. A promise to get his daughter to the Champions League final on time, if Spurs ever got there, means he has to break the habits of a lifetime. His eyes went a long time ago. His mind's on a yellow card. His heart's still in it. A sporting tale (as old as time) of openness, honesty and the redeeming, affirming qualities of friendship, love, three little birds and two gerbils. 'White Hart Down' is a journey that takes us places we've all been. As sporting memoirs go it's a heartfelt, thoughtful, honest but delightful meander down memory lane.

14th International Conference on Hand-Arm Vibration

2019-05-30 Deutsche Gesetzliche Unfallversicherung (DGUV) In May 2019, the Institut für Arbeitsschutz der Deutschen Gesetzlichen Unfallversicherung (IFA) was hosting the 14th International Conference on Hand-Arm-Vibration. The event is organised every four years under the auspices of international expert bodies at changing places. It is aimed at all stakeholders in the subject, whether experts from the occupational safety and health and research communities or management personnel in the areas of manufacture and design. Mechanized manual work is often associated with exposure to vibration that may impact adversely upon the health and well-being of the affected individuals. Besides impairments to comfort and performance, harm to the hand-arm system, possibly permanent, must be prevented as a matter of priority. In a world of work that is becoming more and more complex, combined exposures are also becoming increasingly relevant. What influence does hand-arm vibration have in conjunction with noise or whole-body vibration? What contribution can be made by medicine, diagnostics, epidemiology, measurement technology and prevention to the identification and containment of risks, and better still, to their elimination? What is the role of international regulatory activity in this context? The 14th International Conference on Hand-Arm Vibration aimed to address these and many other questions concerning hand-arm vibration, and to find answers relevant to the field.

Engineering Economics and Cost Estimation is a crucial aspect of any engineering project. It involves present and future economic factors, making it vital to obtain reliable estimates of future costs, benefits, and other economic parameters. Engineers often deal with projects whose scale, complexity, and uncertainty call for sophisticated approaches to planning and budgeting^[1]. Several methods are used for cost estimation, including rough estimates, semi-detailed estimates, or detailed estimates, depending on the needs for the estimates^[2]. Key concepts in this field include overhead costs, cost driver identification, cost allocation methods, capital budgeting, flexible budgeting, zero-based budgeting, budgets, and estimates. Several models are available for developing cost (or benefit) estimates, such as the per-unit model, the segmenting model, cost indexes, the power-sizing model, and learning curve cost estimating. The quality of a cost estimate generally increases as the resources allocated to developing the estimate increase.
