School Accountability, Autonomy and

Choice Around the World Ludger Woessmann

2009 Accountability, autonomy and choice are now the watchwords of education reformers around the globe. This book presents new evidence from the Programme for International Student Assessment (PISA) test on whether students perform better in school systems with such institutional measures in place. It also provides a theoretical framework for considering these reforms and summarizes previous international evidence. The results confirm that various policies promoting accountability, autonomy and choice are strongly associated with higher achievement for students from both disadvantaged and advantaged backgrounds. In particular, choice through public funding for private schools is associated with both higher performance overall and higher equality of opportunity. Providing detailed and rich facets of different forms of accountability, autonomy and choice, this book is unique in its empirically based and internationally oriented treatment of this up-to-date policy topic. It will be of great interest to academics, policy-makers and practitioners, as well as students in education policy and in the economics of education.

Qualitative Analysis for Social Scientists Anselm
L. Strauss 1987-06-26 The teaching of
qualitative analysis in the social sciences is
rarely undertaken in a structured way. This
handbook is designed to remedy that and to
present students and researchers with a
systematic method for interpreting qualitative
data', whether derived from interviews, field
notes, or documentary materials. The special
emphasis of the book is on how to develop
theory through qualitative analysis. The reader
is provided with the tools for doing qualitative
analysis, such as codes, memos, memo
sequences, theoretical sampling and
comparative analysis, and diagrams, all of which
are abundantly illustrated by actual examples
drawn from the author's own varied qualitative
research and research consultations, as well as
from his research seminars. Many of the
procedural discussions are concluded with rules
of thumb that can usefully guide the
researchers' analytic operations. The difficulties
that beginners encounter when doing qualitative
analysis and the kinds of persistent questions
they raise are also discussed, as is the problem
of how to integrate analyses. In addition, there is
a chapter on the teaching of qualitative analysis
and the giving of useful advice during research
consultations, and there is a discussion of the
preparation of material for publication. The book
has been written not only for sociologists but for
all researchers in the social sciences and in such
fields as education, public health, nursing, and
administration who employ qualitative methods
in their work.

Identification Revolution Alan Gelb 2018-01-16
Some 600 million children worldwide do not
legally exist. Without verifiable identification,
they—and unregistered adults—could face
serious difficulties in proving their identity,
whether to open a bank account, purchase a SIM
card, or cast a vote. Lack of identification is a
barrier to full economic and social inclusion.
Recent advances in the reach and technological
sophistication of identification systems have
been nothing less than revolutionary. Since
2000, over 60 developing countries have
established national ID programs. Digital
technology, particularly biometrics such as
fingerprints and iris scans, has dramatically
expanded the capabilities of these programs.
Individuals can now be uniquely identified and
reliably authenticated against their claimed
identities. By enabling governments to work
more effectively and transparently, identification
is becoming a tool for accelerating development
progress. Not only is provision of legal identity
for all a target under the Sustainable
Development Goals, but this book shows how it
is also central to achieving numerous other SDG
targets. Yet, challenges remain. Identification
systems can fail to include the poor, leaving
them still unable to exercise their rights, access
essential services, or fully participate in political
and economic life. The possible erosion of
privacy and the misuse of personal data,
especially in countries that lack data privacy
laws or the capacity to enforce them, is another
challenge. Yet another is ensuring that
investments in identification systems deliver a
development payoff. There are all too many
examples where large expenditures—sometimes
supported by donor governments or
agencies—appear to have had little impact.
Identification Revolution: Can Digital ID be

Harnessed for Development? offers a balanced perspective on this new area, covering both the benefits and the risks of the identification revolution, as well as pinpointing opportunities to mitigate those risks.

When You Reach Me Rebecca Stead 2011-09-01
Miranda's life is starting to unravel. Her best friend, Sal, gets punched by a kid on the street for what seems like no reason, and he shuts Miranda out of his life. The key that Miranda's mum keeps hidden for emergencies is stolen. And then a mysterious note arrives: 'I am coming to save your friend's life, and my own. I ask two favours. First, you must write me a letter.' The notes keep coming, and Miranda slowly realises that whoever is leaving them knows things no one should know. Each message brings her closer to believing that only she can prevent a tragic death. Until the final note makes her think she's too late.

Communications and Networking in

Education Deryn M. Watson 2013-04-17
In most schools the dominant supporting technology has been either the stand-alone personal computer or a modest local network. The situation is changing rapidly as a rising number of schools provide access to the Internet for their staff and pupils, opening avenues for communication and networking hitherto not possible. This book reflects on this change. It aims to further the vision of how these new technologies could improve and transform aspects of education. Yet in parallel it asks serious questions about the realities of an interface between the social, cultural and pedagogical contexts of education and the actual affordances that these new information and communication technologies offer. The chapters in this book provide a heady mix of foresight and practical reporting, of planning for the future but at the same time respecting the problems education already has with current technologies. The richness of the points presented here stems in part from the range of experience of the international authors - from academics and administrators, to teachers and curriculum designers. This mix ensures that the central questions on communications and networking in education are considered not simply from a variety of personal perspectives,

but also from different cultural and environmental experiences. And yet interest also lies in the commonality of reporting and discussion based on activity in the field. All the contributions draw heavily on research and experience in devising and running projects and experimental activities in a range of schools and teacher-training institutions and environments. The opinions expressed are thus grounded in knowledge gained from work embedded in the reality of today's educational settings. This must be the only sound base upon which to consider the issues of the future. This book is essential reading for all professionals involved in all aspects of information and communication technologies in education. Teachers, lecturers, researchers, students and administrators will find it invaluable.

Digital Literacies for Learning Allan Martin 2006

In the 21st century, digital tools enable information to be generated faster and in greater profusion than ever before, to the point where its extent and value are literally beyond imagining. Such quantities can only be meaningfully addressed using more digital tools, and thus our relationship to information is fundamentally changed. This situation presents a particular challenge to processes of learning and teaching, and demands a response from both information professionals and educators. Enabling education in a digital environment means not only changing the form in which learning opportunities are offered, but also enabling students to survive and prosper in digitally based learning environments. This collection brings together a global community of educators, educational researchers, librarians and IT strategists, to consider how learners need to be equipped in an educational environment that is increasingly suffused with digital technology. Traditional notions of literacy need to be challenged, and new literacies, including information literacy and IT literacy, need to be considered as foundation elements for digitally involved learners. Leading international experts from the USA, Canada, Australia, New Zealand, South Africa, Mexico and throughout Europe contribute to the debate, and Hannelore Rader, Librarian and Dean of the University Libraries, University of Louisville, Kentucky, provides the foreword. The book is in two parts: In Part 1,

Literacies in the Digital Age, the contributors analyse how digital technologies have enabled transformative change in the ways in which learning can be constructed, and discuss the nature of the new literacies that have emerged in this new virtual and e-learning environment. In Part 2, Enabling and Supporting Digital Literacies, the contributors go on to consider the ways in which digital literacies can be made available to learners, and how these literacies are being relocated in a more student-centred environment within the broader perspective of learning. Readership: This book takes the issues raised in the successful Information and IT Literacy, also co-edited by Allan Martin, into a broader context. It is essential reading for all information professionals and educators involved in developing strategies and practices for learning in a digital age.

The Evolution, Principles and Practices of Distance Education Börje Holmberg 2005 The evolution, principles and practices of distance education describes distance education as it is today and does so against the background of its history. Basic concerns are how the constituent elements of distance education, i.e. subject-matter presentation and interaction, have been brought about at different stages in this history and what their character has been and is. Thus online conferences and other possibilities opened by modern technology are given attention in the presentation of today's practice. So are theoretical approaches to the subject and the application of these to the practice of distance education. The discussion of student's independence in distance education is thus followed from Hermod and Lighty to Peters. The everyday concerns of distance educators are further carefully dealt with. This book summarises and updates the author's earlier writings at the same time as it pays attention to the evolutionary development of distance education. It is based on the literature available and empirical studies made as well as on the author's practical experience. engl.

Transforming Education in the Gulf Region

Khalid Alshahrani 2016-07-01 Countries in the Arab Gulf are currently experiencing some of the fastest rates of growth and progress in the world. *Transforming Education in the Gulf Region* argues that education systems in these countries need to use innovative pedagogies and best practices in teaching and learning to educate all citizens so that they obtain the knowledge and skills to be productive members of society. This book will contribute to the transformation of education in the Gulf countries by suggesting best practices, research outcomes and case studies from experts in the Gulf region. It has become increasingly evident in recent years that Gulf countries need to use emerging learning technologies to cater for the needs of learners and to provide maximum flexibility in learning. There is also a growing practical need to use electronic technologies, since learning materials are more widely available in electronic formats than in paper-based formats. This book focuses on the role of emerging technologies and innovative pedagogies in transforming education in six Gulf countries in the region (Saudi Arabia, United Arab Emirates, Kuwait, Qatar, Oman and Bahrain). With contributions from experts around the world, the book argues that the time is right for Arab Gulf countries to make the transition to electronic learning and that they need to implement the outcomes of research and adopt best practices to transform and revolutionize education to prepare learners in the Gulf region for the 21st Century. The book should be of interest to academics and students in the areas of higher education, learning technologies, education policy and education reform. It should also be of interest to educators and policymakers in the Gulf region.

Shaping Higher Education with Students
Vincent C. H. Tong 2018-03-06 Forging closer links between university research and teaching has become an important way to enhance the quality of higher education across the world. As student engagement takes centre stage in academic life, how can academics and university leaders engage with their students to connect research and teaching more effectively? In this highly accessible book, the contributors show how students and academics can work in partnership to shape research-based education. Featuring student perspectives, it offers academics and university leaders practical suggestions and inspiring ideas on higher

education pedagogy, including principles of working with students as partners in higher education, connecting students with real-world outputs, transcending disciplinary boundaries in student research activities, connecting students with the workplace, and innovative assessment and teaching practices. Written and edited in full collaboration with students and leading educator-researchers from a wide spectrum of academic disciplines, this book poses fundamental questions about learning and learning communities in contemporary higher education.
